

News item 7th January 2010

Eurosash cream on cream is here at last!!!

As part of our on-going product development we are pleased to announce that our cream grained **eurosash** is now available on a cream base. All cream grained windows produced to date have been foiled on a white base, resulting in a 'little bit of white' being visible inside the balance chamber of the outer frame. The new cream based outer frame is coloured throughout so the inside of the balance chambers are now cream.

The new cream base outer frame with cream foiling to give a timber-like appearance looks fantastic, and it gives **eurosash** yet another distinct selling advantage over its competitors. The new profiles are in stock and are now being used as standard, and every cream grained **eurosash** produced from 7th January 2010 onwards will be cream on cream.
