

### News item 25<sup>th</sup> Feb 2008

We now have in stock several new and exclusive items which further enhance the performance and appearance of our window. We are constantly looking for ways to improve and individualise our **eurosash**, and the items listed below are now part of our standard features.

- **Eurosash** has been using a woolpile infill strip on white windows since 2007 which has been very well received and because of its' popularity we have now launched it in all our colour options. Its practicality means that when the window is closed, there is no visible unattractive grey woolpile brush seal as was originally displayed, it is easier to clean the frame and has a neater appearance. The infill strip will not attract dust in the same way as the previous woolpile was prone to doing. This is now fitted as standard at no extra cost right across our range.

- Exclusive to **eurosash** a new Cill Drip Rail is available to order. Our design team are always looking into new forward thinking ideas which will enhance our vertical sliding sash window. After months on the drawing board the cill drip is now a reality and is available in all our colours. The neat design of the drip allows for a greatly improved method to further prevent the egress of water while enhancing the outside appearance of the window where it meets the concrete cill.
